

4. Project Planning Phase

FITBUDDY – AI FITNESS PLAN GENERATOR USING GEMINI MODELS

- **Development Strategy:** Divide the project into manageable stages covering requirements, design, implementation, testing, documentation, and demonstration.
- **Suggested Milestones:** Requirement collection → architecture and database design → frontend creation → FastAPI backend → Gemini integration → plan storage → feedback update feature → admin view → testing → documentation → demonstration.
- **Work Breakdown:** Frontend handles forms and presentation; backend handles APIs and application logic; AI integration handles prompts and model responses; database handles persistence; testing validates each module and complete workflows.
- **Version Control:** Git and GitHub can be used to maintain project versions, track changes, and store the project source code.
- **Deliverables:** Source code, requirements file, configuration template, database components, test files, project documentation, screenshots, and demonstration material.
