

7. Project Documentation Phase

FITBUDDY – AI FITNESS PLAN GENERATOR USING GEMINI MODELS

- Project Documentation Contents: Introduction, problem statement, objectives, system analysis, requirements, architecture, module descriptions, database design, implementation, testing, installation, configuration, usage, and limitations.
- Installation Guide: Install Python and project dependencies, configure environment variables, prepare the database, and start the FastAPI application using Uvicorn.
- Configuration Guide: Add the required Gemini API configuration to an environment file. API keys should not be committed to a public repository.
- User Guide: Open the application, enter the requested fitness information, generate a plan, review the result, and submit feedback when changes are required.
- Maintenance: Keep dependencies updated, monitor API usage, validate database operations, and maintain GitHub version history.
